

7 Day Cardiac Event Monitor

This is a small recorder that is worn for up to seven days. It is used to record and identify heart rhythm abnormalities, for example, rapid heartbeats (palpitations), slow heart rhythms or missed beats. It enables your doctor to know what is happening to your heart rhythm at the time of your symptoms.

You will need to undress to the waist for this test to be undertaken; ladies will not be required to remove their bra. You are advised to wear a loose fit top/shirt to enable the monitor leads to exit.

Please note this investigation may be carried out by a male or female member of staff. If you require a chaperone please contact us as soon as possible prior to your appointment so that we may arrange this. Alternatively you may prefer to have a relative accompany you.

We use the highest quality hypoallergenic electrodes that are currently available on the market. However, skin irritation can still occur in a few people. Therefore if you have sensitive skin, please inform the Cardiographer at your appointment, who will advise you further.
