

Lung Function Information

This test will measure how well your lungs are working. We will measure your height and weight prior to the test. You will be asked to take a deep breath in and blow it all out hard and fast through a tube connected to a lung function computer. You will be seated during the test as the hard and fast blowing can make you feel temporarily lightheaded. You will not be required to remove any clothing for the lung function test and it takes on average 15 minutes to complete.

This test may be performed by either a male or female member of staff. If you require a chaperone please contact us as soon as possible prior to your appointment so that we may arrange this. Alternatively you may prefer to have a relative accompany you.

NOTE: Please notify us if you currently have something that may restrict your lung function capacity (e.g. chest infection or a cold) so we can rearrange your appointment.
